Level 3 Calculus, 2019

91577 Apply the algebra of complex numbers in solving problems

9.30 a.m. Tuesday 26 November 2019
Credits: Five

Achievement	Achievement with Merit	Achievement with Excellence
Apply the algebra of complex numbers in solving problems.	Apply the algebra of complex numbers, using relational thinking, in solving problems.	Apply the algebra of complex numbers, using extended abstract thinking, in solving problems.

Check that the National Student Number (NSN) on your admission slip is the same as the number at the top of this page.

You should attempt ALL the questions in this booklet.

Show ALL working.

Make sure that you have the Formulae and Tables Booklet L3–CALCF.

If you need more space for any answer, use the page(s) provided at the back of this booklet and clearly number the question.

Check that this booklet has pages 2–12 in the correct order and that none of these pages is blank.

YOU MUST HAND THIS BOOKLET TO THE SUPERVISOR AT THE END OF THE EXAMINATION.

TOTAL

ASSESSOR'S USE ONLY

QUESTION ONE

- (a) Solve the equation $x^2 - 4x + 7 = 0$.

Give your solution in the form $a \pm \sqrt{b}i$, where a and b are rational numbers.

- (b) When the polynomial $2x^3 - x^2 - 4x + p$ is divided by $x - 3$, the remainder is 38.

Find the value of p .

- (c) Complex numbers u and v are $u = q + 2i$ and $v = 1 - 2i$.

Given that $\left| \frac{u}{v} \right| = 13$, find all possible values of q .

QUESTION TWO

- (a) If $p = 3 - i$ and $q = -2 + 5i$, find $\bar{p} - 3q$, giving your solution in the form $a + bi$.

- (b) Write $\frac{3}{4 - \sqrt{5}}$ in the form $a + b\sqrt{5}$ where a and b are rational numbers.

- (c) Solve the equation $z^4 + 16p^2i = 0$, where p is real.
Write your solution in polar form, in terms of p .

QUESTION THREE

ASSESSOR'S
USE ONLY

- (a) If $u = q^2 \operatorname{cis} \frac{3\pi}{4}$ and $v = q^3 \operatorname{cis} \frac{\pi}{3}$, write $\frac{u}{v}$ in the form $r \operatorname{cis} \theta$.

- (b) If x and y are real numbers and $(x + iy)(2 + i) = 3 - i$, find the values of x and y .

- (c) Solve the following equation for x in terms of w .

$$2\sqrt{x-3} - w\sqrt{x} = 0$$

- (d) Two complex numbers are defined by $u = 1 + pi$ and $v = 5 + 3i$.

Given that $\arg\left(\frac{u}{v}\right) = \frac{\pi}{4}$, find the value of p .

**Question Three continues
on the following page.**
